

Write your MySQL query statement below

```
with cte as (  
  select caller_id as id, duration  
  from Calls  
  union all  
  select callee_id as id, duration  
  from Calls  
)  
  
-- select id, sum(duration) as total  
-- from cte  
-- group by id XXXXXXXXXXXX WRONG  
  
-- eventually, we need to group by country not individuals!  
-- there is no point to group by individuals  
  
select distinct name as country  
from  
(  
  select left(phone_number,3) as code, avg(duration) total, co.name as name  
  from Person p  
  join Calls c  
  on c.caller_id = p.id or c.callee_id = p.id  
  join Country co  
  on co.country_code = left(phone_number,3)  
  group by 1  
  having total > (select avg(duration) from cte)  
)t
```
